- *ReactJS and beginner level Angular.*

- *C++ , C# and python.*
- *OpenGL using GLUT (C++).*
- *Moderate experience in unity*
- *Android development (Java).*
- *UI/UX design using Figma/Adobe-XD*

Projects

Ecommerce-UI   *Sep 15, 2023 - Oct 10, 2023*
This React- e-commerce platform offers a simple, user-friendly design with SwiperJS, Framer Motion and React Router for fluid page transitions. It's designed to be responsive across mobile, tablet, and desktop devices. While currently utilizing placeholder content, the site is primed for seamless API data integration. It features a landing page, an extensive product catalog with filtering options, and a detailed product view page for an immersive shopping experience.(GitHub)(Website)

Weather   *Nov 11, 2023- dec 11, 2023*
A Simple Weather website built with ReactJS to deliver a reliable performance that uses google map's api for reverse and normal geocoding in combination with open-metoe's api for the latest info on the current weather. (GitHub)(Website).

Web Music Player   *Sep 28, 2022 - May 4, 2023*
A responsive music player constructed using vanilla technologies (HTML, CSS, JS). It offers features such as song shuffling, custom queue creation, a daily refreshed mix playlist, and a choice of four different themes. (GitHub)(Website).
